

CONNOR LAM

Berkeley, CA 94705 (Open to Remote) | (949) 633-0515 | c.lamd@berkeley.edu
[linkedin.com/in/connor-lam-128636220/](https://www.linkedin.com/in/connor-lam-128636220/) | github.com/c-lamd | c-lamd.github.io

TECHNICAL SKILLS

Front End | React Native, Javascript, CSS

Back End | Python, Java

Testing/Deployment | AWS: Lambda, AWS: EC2, AWS: S3, AWS: Amplify

Developer Tools | Git, npm, Expo

EXPERIENCE & PROJECTS

Personal Project | PLUR plurapp.webflow.io

Oct 2022 - Present

Concert and event review mobile application

Javascript | React Native | Lambdas | AWS | Expo

- Directed a fullstack development of a ratings and reviews mobile app to allow users to post reviews, view average ratings, search by keyword, date, and/or star ratings for an artist or event
- Planned and structured database with scalability to account for future fluctuation of users
- Deployed and tested ever-changing iterations of the app using Expo and Amplify CLI
- Developed and maintained project plans, schedules, and budgets, using project management tools and methodologies

Researcher | Stratus API - Cloud at Cal

Feb 2023 - Present

Train and deploy machine learning in the cloud with a single API

JavaScript | HTML | AWS | Python

- Facilitated discussions with research team to assess client expectations and construct cloud architecture design
- Modeled data and constructed API endpoints to allow for seamless frontend integration to backend
- Implemented automation of training machine learning models to be readily deployed with ease for small-medium businesses

Back-End Software Engineer Intern | Rumble

Jun 2022 - Aug 2022

Remote learning management system web application

JavaScript | Python | AWS: Lambda

- Developed and implemented scripts to collect real-time and historical data for popular E-Sports games
- Integrated scripts into Rumble's data pipeline using Amazon Web Services to provide insightful analysis and powerful visualization tools to clients in the E-Sports industry
- Worked independently to ensure the seamless flow of data ingestion and demonstrate proficiency in back-end engineering

Personal Project | Status Checker

Dec 2021 - Feb 2022

Be notified when the status of an item on your wishlist changes

Python | AWS

- Implemented a real-time web-scraper(max 10 second latency) to check the availability of various products including a limited edition Coach bag, as well as apartments on Danish websites
- Designed script to send an email to interested users when availability changes
- Navigated AWS tools and automated this scraping service, resulting in tangible impacts for friends and family

Back-End Software Engineer Intern| Delphi Engineering Group

Dec 2021-Jan 2022

Configure commercial radar systems

Lua | VHDL | C | Java

- Optimized scripts to interpret and transmit proper information among registers of commercial aerospace radar systems via bit manipulation
- Debugged existing VHDL(VHSIC Hardware Description Language) programs for PG4 FPGA(field programmable gate array)

EDUCATION

University of California, Berkeley - Bachelors of Arts, Computer Science & Data Science

Dec 2023

Irvine Valley College - Associates of Arts, Math & Physics

2021
